Tatlist Mobile App

1. Executive Summary

Tatlist is a mobile application designed to modernize the tattoo and body art supply ordering experience. The app serves as a digital platform connecting tattoo artists and body art professionals with supplies through Lucky's API integration, with Tatlist acting as Lucky's exclusive distributor while also offering non-competing products from other suppliers, such as Black Eye.

2. Product Overview

2.1 Product Vision

To create a streamlined, modern mobile application that simplifies supply ordering for tattoo artists and body art professionals, offering convenient delivery options and efficient inventory management.

2.2 Target Audience

- Professional tattoo artists
- Body art professionals
- Tattoo shop owners and managers
- Independent tattoo artists

2.3 Key Value Propositions

- Streamlined ordering process with inventory list building
- Real-time inventory updates via API integration
- Flexible fulfillment options (delivery or pickup)
- Modern, intuitive user interface
- Integrated payment processing with Square

3. Business Requirements

3.1 Business Objectives

- Establish Tatlist as the primary digital distributor for Lucky's products
- Offer Black Eye product line alongside Lucky's products within the app
- Increase order frequency and volume through convenient mobile ordering
- Expand market reach beyond traditional sales channels
- Improve customer retention through personalized inventory management

3.2 Success Metrics

- Monthly active users (MAU)
- Order conversion rate
- Average order value (AOV)
- Customer retention rate
- Delivery efficiency metrics

4. Functional Requirements

4.1 User Account Management

Priority: High

- User registration and account creation
- Business information input (provide document upload for tax exempt status)
- User authentication and security
- Profile management and editing capabilities

4.2 Product Catalog and Browsing

Priority: High

- Integration with Lucky's API for real-time product catalog
- Product search and filtering capabilities
- Product detail pages with images, descriptions, and pricing
- Category-based product organization

4.3 Inventory List Management

Priority: High

- Create and manage personalized inventory lists
- Heart/favorite products to add to inventory lists
- Add frequently ordered items to inventory lists
- Quick reorder functionality from saved inventory lists
- Inventory list sharing capabilities

4.4 Order Management

Priority: High

- Shopping cart functionality
- Order placement and confirmation
- Order history and tracking
- Order modification capabilities (pre-processing)

4.5 Payment Processing

Priority: High

- Square payment integration
- Secure card information storage
- Multiple payment method support
- Email receipt generation and delivery

4.6 Fulfillment Options

Priority: High

- Delivery option with fee calculation
- Free pickup at Stigma Ink location (3434 W Columbus Dr Suite 201 - 202, Tampa, FL 33607)
- Google Maps integration for pickup address
- Delivery scheduling and tracking

4.7 Inventory Management

Priority: Medium

- Real-time inventory status updates
- Out-of-stock notifications
- Alternative product suggestions for out-of-stock items
- Low stock alerts

4.8 Delivery Optimization

Priority: Medium

- Route optimization for delivery drivers using Uber-like routing technology
- Multi-stop delivery planning
- Delivery status updates for customers

4.9 Upselling and Cross-selling

Priority: Low

- Product recommendations
- Upselling opportunities during delivery
- Related product suggestions

5. Technical Requirements

5.1 Platform Requirements

- Native mobile application (iOS and Android)
- Modern, responsive design with black and white color scheme
- Offline capability for viewing saved inventory lists

5.2 API Integrations

- Lucky's API for product catalog and inventory
- Square API for payment processing
- Google Maps API for location services
- Email service integration for notifications

5.3 Performance Requirements

- App load time: < 3 seconds
- Search response time: < 2 seconds
- Payment processing time: < 30 seconds
- 99.9% uptime requirement

5.4 Security Requirements

- PCI DSS compliance for payment processing
- SSL/TLS encryption for all data transmission
- Secure user authentication
- Data privacy compliance (CCPA, GDPR where applicable)

6. User Experience Requirements

6.1 Design Principles

- Clean, modern black and white color scheme
- Intuitive navigation similar to existing Black Eye Products Mobile
- Mobile-first design approach
- Accessibility compliance (WCAG 2.1 AA)

6.2 User Flows

- **Onboarding Flow:** Account creation → Business information → Browse products → Heart products as favorites for inventory list setup
- **Ordering Flow:** Browse products → Heart products as favorites to add to inventory list → Add to cart → Checkout → Payment → Confirmation
- **Reorder Flow:** Access inventory list → Select items → Quick checkout

7. Non-Functional Requirements

7.1 Scalability

- Support for 10,000+ concurrent users
- Ability to handle seasonal demand spikes
- Horizontal scaling capabilities

7.2 Reliability

- 99.9% uptime SLA
- Automated backup and recovery procedures
- Error handling and graceful degradation

7.3 Compliance

- PCI DSS Level 1 compliance
- Tax calculation accuracy for all jurisdictions
- Business license and tax exemption verification

8. Integration Requirements

8.1 Third-Party Services

- **Lucky's API:** Product catalog, pricing, inventory levels

- **Square:** Payment processing, receipt generation
- **Google Maps:** Location services, delivery routing
- **Email Service Provider:** Order confirmations, notifications

8.2 Data Exchange

- Real-time inventory synchronization
- Order status updates
- Customer communication triggers

9. Success Criteria and KPIs

9.1 User Adoption

- 1,000 registered users within first 6 months
- 70% user retention rate after 30 days
- Average 3+ orders per user per month

9.2 Operational Efficiency

- 95% order fulfillment accuracy
- Average delivery time within promised windows
- 20% reduction in order processing time

10. Timeline and Milestones

Overall Timeline: 60 Days Total (45 Days Development + 15 Days Testing/Training)

Phase 1 (Days 1-20): Core Development

- App infrastructure setup
- User account management with document upload
- Basic product catalog integration with Lucky's API
- Square payment integration setup

Phase 2 (Days 21-35): Feature Implementation

- Inventory list management with heart/favorite functionality
- Shopping cart and ordering system
- Fulfillment options (delivery and pickup)
- Email notification system

Phase 3 (Days 36-45): Advanced Features & Polish

- Route optimization for delivery drivers
- Alternative product suggestions
- UI/UX refinements and testing
- Final integrations and optimizations

Phase 4 (Days 46-60): Testing, Training & Launch Preparation

- Comprehensive bug fixes and quality assurance
- Client training and onboarding
- Test user feedback integration
- Final deployment and launch readiness

11. Risk Assessment

11.1 Technical Risks

- API integration complexity
- Payment processing compliance
- Mobile platform fragmentation

11.2 Business Risks

- Market adoption rate
- Competition from established players
- Supply chain dependencies

11.3 Mitigation Strategies

- Comprehensive testing protocols
- Phased rollout approach
- Strong vendor relationships
- Customer feedback integration

12. Next Steps

1. Immediate Actions:

- Tatlist to provide Excel sheet with product information (SKU, data, images)
- Titan Secure Technologies to investigate Square in-app payment feasibility
- Include Google Maps link for shop address on pickup invoices

2. Development Planning:

- Finalize technical architecture
- Create detailed user stories and acceptance criteria
- Establish 60-day development timeline and resource allocation

3. Stakeholder Alignment:

- Review and approve PRD with all stakeholders
- Establish regular check-in meetings
- Define change management process
